Department of Mathematics
Example University
Pittsburgh, PA 15213

Dear Members of the Committee,

I am writing to apply for the graduate programme in Mathematics beginning in the autumn of 2027. I will complete my B.S. in Computer Science, with a minor in Mathematics, in May 2027.

My interest in the programme comes from two directions. As an undergraduate I worked on line-breaking algorithms and their optimality proofs, which led me to dynamic programming and, through it, to combinatorial optimisation. At the same time, a course on real analysis convinced me that I want to spend the next several years proving things rather than only implementing them.

During the past year I have been a teaching assistant for an introductory course on imperative programming. Writing practice exams for forty students taught me how much a clear proof depends on the order in which the ideas are presented — a lesson I expect to apply in a research setting.

I have enclosed my curriculum vitae, transcript and a writing sample. Letters of recommendation from Professors A. Author and B. Coauthor will be submitted separately. Please do not hesitate to contact me if any part of the application is missing.

Thank you for your consideration.

Sincerely,

Curriculum vitae; transcript; writing sample Professor A. Author P.S. My application number is 2027-0412.
